CONTENTS

Preface 1

INVITED PAPERS

H. BRUNNER
The numerical treatment of Volterra integro-differential equations with unbounded delay 5

W. LINIGER
A quasi-direct fast Poisson solver for general regions 25

LI. TA-TSIEN
A class of non-local boundary value problems for partial differential equations and its applications in numerical analysis 49

N. PAPAMICHAEL
Numerical conformal mapping onto a rectangle with applications to the solution of Laplacian problems 63

P. RABINOWITZ
Product integration based on Hermite–Fejér interpolation 85

CONTRIBUTED PAPERS

M.B. ABD-EL-MALEK and S.N. HANNA
Approximate solution of a flow over a ramp for large Froude number 105

J.M. BARRY, J.P. POLLARD and E.L. WACHSPRESS
A method of parallel iteration 119

L. BEERNAERT and D. ROOSE
Efficiency results for Gaussian elimination on the iPSC/2 hypercube 129

H. BRASS and K.-J. FÖRSTER
Error bounds for quadrature formulas near Gaussian quadrature 145

P.P.N. DE GROEN and M. VAN VELDHUIZEN
A stabilized Galerkin method for convection dominated diffusion problems 155

M. DE LUCA and A. MAUGERI
Quasi-variational inequalities and applications to the traffic equilibrium problem; discussion of a paradox 163

Contents

E. DICK
Multigrid acceleration of a flux-difference splitting method for steady Euler equations 173

H. FISCHER
Automatic differentiation of characterizing sequences 181

J.A. FORD and R.-A. GHANDHARI
On the use of function-values in unconstrained optimisation 187

L. JACOBSEN and H. WAADELAND
When does $f(z)$ have a regular C-fraction expansion or a normal Padé table? 199

H. JANSSEN and R. VAN DOOREN
A one-step integration routine for normal differential systems, based on Gauss–Legendre quadrature 207

D.K. KAHANER, W.F. LAWKINS and S. THOMPSON
On the use of rootfinding ODE software for the solution of a common problem in nonlinear dynamical systems 219

A. KIPER
Some recurrence relations and their parallel evaluation using nested recurrent product form algorithm 231

R. KLEMPOUS, J. KOTOWSKI and M. KULISZEWSKI
The linearized version of an algorithm for the mixed norms problem 237

A. KNOPFMACHER and J. KNOPFMACHER
Inverse polynomial expansions of Laurent series, II 249

P. KÖHLER
Estimates for Sard's best formulas for linear functionals on $C^s[a, b]$ 259

J.H. LEE and S.N. YANG
Shape preserving and shape control with interpolating Bézier curves 269

LI. SHOUFU
Stability and B-convergence of general linear methods 281

F. MAMPAEY
A numerical technique to increase the stability of the ADI method in solidification simulation 297

P. MARZULLI and G. GHERI
Estimation of the global discretization error in shooting methods for linear boundary value problems 309

T. MIYAKODA
Iterative methods for multiple zeros of a polynomial by clustering 315

MU MU
Global classical solutions to initial-boundary value problems for the potential vorticity equation 327

K. RUOTSALAINEN and J. SARANEN
On the collocation method for a nonlinear boundary integral equation 339

G. SONNEVEND
Applications of the notion of analytic center in approximation (estimation) problems 349

J. SPOELSTRA
The modelling of oil agglomeration of coal fines 359

H. SUGIURA and T. SAKURAI
On the construction of high-order integration formulae for the adaptive quadrature method 367

M. TEZER
On the numerical evaluation of an oscillating infinite series 383

G. VANDEN BERGHE, V. FACK and H.E. DE MEYER
Numerical methods for solving radial Schrödinger equations 391

C.H. WU and S. WANG
Domain decomposition technique for the continuity equations of semiconductor device models 403

List of invited talks 413

List of papers presented at the congress 414
